## Description

The **new via ferrata** was built in 2022 by the mountain hunters Ostirol for training and recovery purposes and is now also one of the generally accessible via ferrata in the Galitzenklamm. With a length of **650 meters** and with about **220 hm** quite airy in the height the via ferrata leads directly over the raging floods of the Galitzenklammbach. The via ferrata requires a certain amount of strength and endurance. The real highlight, however, is the "**Mountain Warrior**" variant, an absolutely difficult **via ferrata** (E/F) with a tricky overhang that can be climbed depending on the chosen technique and skill.

**Difficulties:** Access point E, in some places C/D, a longer section D, in the upper area a section C. On the secured descent also up to B!

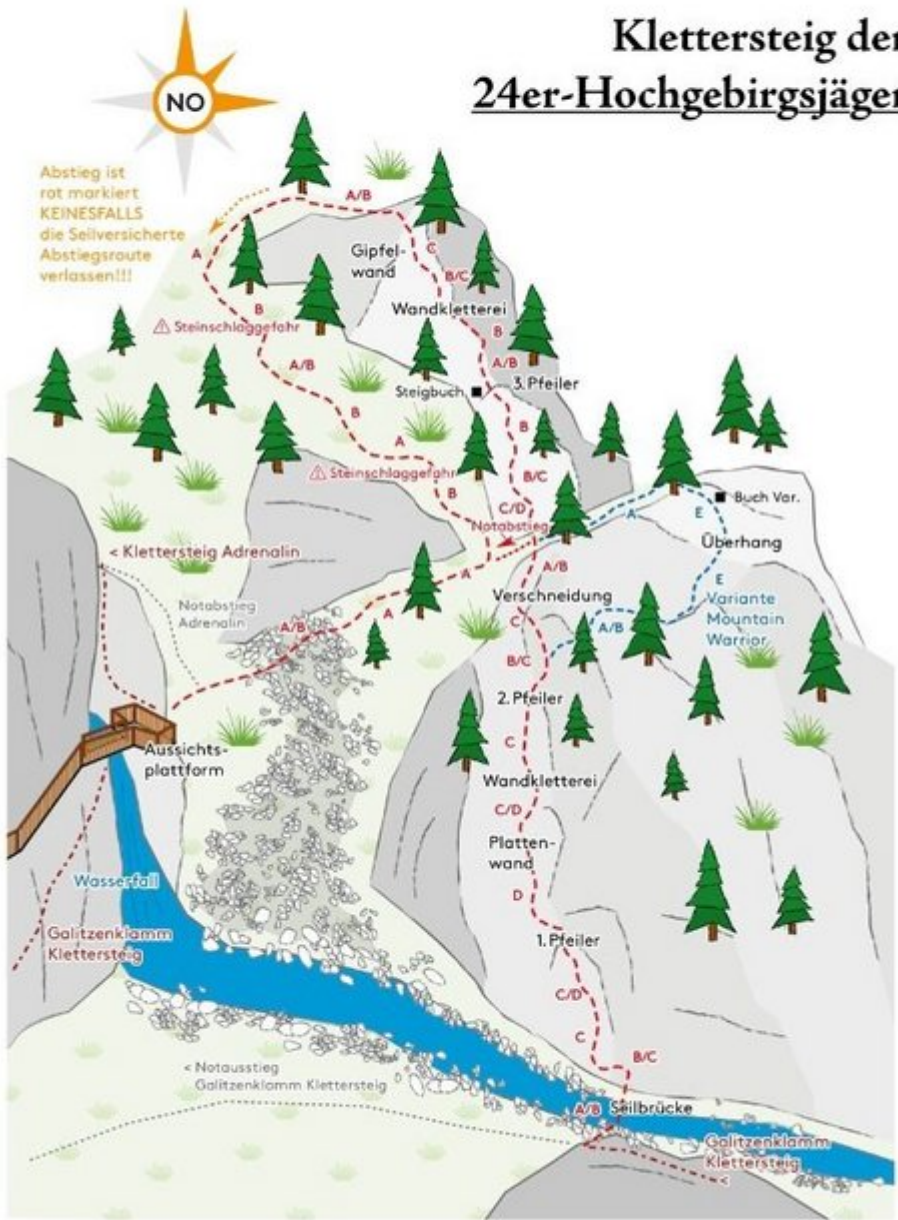

**Approach:** The approach is via the Galitzenklamm via ferrata (C).

**Descent:** From the highest point of the via ferrata through steep forest terrain, which is, however, completely rope-secured up to the viewing platform.

**Special features:** On the "normal ascent" the airy lines are convincing. Special is the variant "Mountain Warrior" - absolutely difficult via ferrata (E/F) with imposing overhang - and only for really strong forearms!
